Sail Faster with

**EasyRigging®**

The lightweight choice.

## Warranty and safety sheet EasyRigging.

Dear Customer,

Joure, The Netherlands 1-1-2007

Thank you for buying this **EasyRigging®** product.

This product has been manufactured to the highest quality standards to your specifications.

The length should be measured at a pretension of  $\pm 100$  kg. When the stay is coiled for transportation, it can shrink up to 2%. This can be solved by pretension the stay.

When pretension the stay only use the lashing eyes in the end fittings. In normal use on board of your boat the stay will not shrink, but when stored (and coiled again) it may shrink again.

When installing the stay please take care that there are no loops and turns in the cable, as this can effect the break load and live span of the cable.

The base material of this **EasyRigging®** stay is PBO, a very strong, light and stiff fiber.

This fiber is protected from light and water. This is done in the **SmartRigging®** factory during production .

The thin black plastic cover is to protect the PBO from light and moisture.

The cover is molded in, in the plastic end terminals to keep the stay enclosed from the environment.

It is very **important to protect the stay against chafe**. When the black plastic cover is damaged or chafed through (and the gold colored PBO is visible) the stay has to be repaired or replaced.

The cover of a **EasyRigging®** stay can be cleaned with fresh water and the use of a mild detergent. On no occasion may it be cleaned by using a solvent or any other chemicals as this can affect the structural integrity of the stay.

All **EasyRigging®** products come with a **1 year warranty** on manufacturing or material faults starting on production date. .... - .....- 2007. Produced for Client:.....

We hope that this sheet helps you with the **Easy** installing and maintenance of our product and helps you to enjoy your sailing.

Best Regards,

Your **EasyRigging** Team
